(a) weights, S = 20 m, 2S-eq, x = 12.6 m
weight $g(x)\,C/\Delta x$
record coordinate x (m)
uniform (structure-agnostic)
min-variance invariant
invariant, $\sum g = 0$
(b) price of structure-agnosticism
Var / Var(uniform), white noise
entry-shift range S (m)
min-variance invariant
invariant, $\sum g = 0$
Cauchy-Schwarz bound
matched filter (not invariant)
(c) fragility to model error
invariance defect (max-min)/mean
entry-shift range S (m)
min-var., sensor +0.5 m
$\sum g$=0, sensor +0.5 m
min-var., span-2 El x1.2
$\sum g$=0, span-2 El x1.2
uniform (any error)
